

TSIM (former OT-IM)

Welcome to the ONF Transport Specific Information Model (TSIM) project!

The ONF TSIM project (formerly Open Transport Information Model - OTIM) chartered under the ONF [Open Transport Configuration & Control \(OTCC\)](#) is to facilitate knowledge transfer of the base technology specifications (such as the ITU-T Recommendations for Media, OTN, Ethernet, MPLS-TP, Synchronization, Resilience/Protection, etc.) to be applied by the OTCC interface sub-projects such as TAPI and WT.

The project uses the following mailing/discussion lists: OTCC mailing list (opentransport@opennetworking.org) and OIMT mailing list (information-modeling@opennetworking.org).
