

#10: Supported alarms

Status	EXECUTED
Stakeholders	
Outcome	
Due date	
Owner	Martin Skorupski

Decision

Adding

- AirInterface::AirInterfaceCapability::supportedAlarmList
- AirInterfaceDiversity::AirInterfaceDiversityCapability::supportedAlarmList
- PureEthernetStructure::PureEthernetStructureCapability::supportedAlarmList
- HybridMwStructure::HybridMwStructureCapability::supportedAlarmList
- EthernetContainer::EthernetContainerCapability::supportedAlarmList
- TdmContainer::TdmContainerCapability::supportedAlarmList

attributes of data type = String and multiplicity = [*] .

Adding the comment and the default value of the existing *::*:supportedAlarms attributes to the new *::*:supportedAlarmList attributes

Setting the stereotype "deprecated" at all the existing *::*:supportedAlarms attributes

Background

The supported alarms of capability object classes could be modeled as string with a multiplicity of "*" instead of one huge comma separated string.
